       Polymer reagents containing reactive functional groups are crosslinked
AB
       by reacting them with compounds (crosslinking agents) which contain
       complimentary functional groups and have large nonlinear polarizability.
       The resulting polymer reagents, after poling, are useful for nonlinear
       optic applications. Also disclosed are the mixture which react to form
       the crosslinked polymer and novel crosslinking agents.
   100042-81-7P, Isocyanatoethylmethacrylate-methyl methacrylate
      copolymer
        (prepn. of, for crosslinked polymer systems for nonlinear optical
        applications)

The title compns. comprise (A) polymers of (a) 20-80% monomers contg. C-C AB double bond and perfluoroalkyl group, (b) 80-20% of monomers contg. C-C double bond and NCO, epoxy, methylol, N-alkoxymethyl, and/or OH group and (B) polymers of the monomer b. A copolymer of 45% CH2:CMeCO2CH2CH2(CF2)8F and 55% methacryloyloxyethyl isocyanate (I) and a homopolymer of I were used with dibutyltin dilaurate on glass plates.

     WO 1998-JP2234
                            19980521
     A compn. capable of forming an antireflection or light absorption film
ΑB
     which satisfactorily absorbs radiations having wavelengths of 100 to 450
     nm, is free from the diffusion of a photo-generated acid into the film or
     the intermixing of a resist with the film, and is excellent in storage
     stability and step coverage properties; and novel compds. and novel
     polymers useful for the compn. The compn. contains a compd. which is a
     (meth)acrylic monomer or polymer having at least one isocyanate or
     thioisocyanate group bonded to a side chain thereof through an alkylene
     group, etc., or contains the compd. or polymer which has an aminated or
     hydroxylated org. chromophore which absorbs light in the wavelength region
     of 100 to 450 nm and is bonded to the isocyanate or thioisocyanate group.
     The compn. is applied to a substrate and baked to form a film serving as,
     e.g., an antireflection film. A chem.-amplification-type resist is
     applied to this film, and the resist film is exposed to light and then
     developed to form a resist image with high resoln. Due to the presence of
     the isocyanate or thioisocyanate group in the compd., the film serving as,
     e.g., an antireflection film is cured through crosslinking during baking.
     Due to the presence of the org. chromophore, the film absorbs exposure
     light in the wavelength region of 100 to 450 nm.
     216989-14-9P, N-(2-Methacryloyloxyethyl)-9-methylanthracene
     carbamate-methyl methacrylate-methacryloxyethyl isocyanate copolymer
     RL: PNU (Preparation, unclassified); TEM (Technical or engineered material
     use); PREP (Preparation); USES (Uses)
        (compn. for antireflection or light absorption film)

     The title compn. contains as essential components (a) a polymer having a
AΒ
     repeating structural unit [-CH2-C{CONH-(CH2)n-OCO-CR2:CH2}R1-] (n = 1-20;
     R1, R2 = H, Me), a CO2H content of an acid equiv. 200-700 (the wt. of a
     polymer having 1 equiv of CO2H), and a wt. av. mol. wt. 10000-200,000 and
     (b) a photopolymn. initiator(s). The compn. is very useful as a resist
     for manufg. printed circuit boards.

                     A2
     The title compn. contains (a) a photopolymg. unsat. compd. prepd. by the
AΒ
     addn. reaction of .gtoreq.1 selected from o-cresol-, phenol-, and
     halogenated phenol-novolak-type epoxy resins with an unsatd. carboxylic
     acid (acid equiv/epoxy equiv ratio = 0.1-1.0) and the reaction of the
     sec-OH group of the resulting unsatd. compd. with isocyanate Et acrylate
     (isocyanate equiv/OH equiv ratio = 0.1-1.0) and (b) a photopolymn.
     initiator generating a free radical upon active ray irradn. The title
     element comprises a film support laminated with the compn. The compn.
     shows improved photo-curing properties and thermal resistance. Thus, a
     photosensitive resin compn. comprised a photopolymg. compd. prepd. by
     reacting a reactant of EOCN 104 (o-cresol-novolak-type epoxy resin) and
     acrylic acid with isocyanato Et acrylate and 2,4-diethylthioxanthone.
     202121-81-1P, Acrylic acid-EOCN 104-isocyanatoethyl acrylate
     copolymer 202121-82-2P, EOCN 104-isocyanatoethyl
     acrylate-methacrylic acid copolymer
     RL: PNU (Preparation, unclassified); TEM (Technical or engineered material
     use); PREP (Preparation); USES (Uses)

     The compns. consist of (a) 100 parts photopolymg. unsatd. copolymers
AB
     consisting of repeating units I and II in (9-1):(1-9) mol ratio [R1-3=H,
     C1-5-alkyl, halo; X = dicarboxylic acid minus a carboxylic group; A =
     (meth)acryloyl], (b) 5-100 parts epoxy compd., and (c) 0.1-30 parts
     photopolymn. initiator or sensitizer. These compns., mainly for prepn. of
     protective mask in fabrication of printed circuits and for many other
```

purposes, provide resists with high resistance to chems., high insulation, high resistance to solder bath, and mech. strength, can be further cured by heat.
